## Simple Web App with GIN Framework

shabrinur @ github

Task: Create a web app consists of:

1. Index page with a text field input for name and a submit button.

2. Page that will display result for the submitted name as part of welcome message.

3. Error handling for invalid URL/pages.

Index Page

Landing page for web app, accessible from base URL or from **Assignment** menu in navigation bar.

Type a name in the field input and click **Submit** to view **Welcome Page**.

Welcome Page

Accessible by submitting name through the form in **Index Page**.

Display the submitted name as part of welcoming message.

Error Page

Accessible by entering invalid path in address bar or trying to access a valid path using mismatched HTTP method for that path.

Display general message informing user that the expected page is not found.
